For a library that is looking for paypal, they require the use of the CVS method.

However I cannot find any way to use this payment method using the Magento backend. Are there any sneaky ways of bypassing this requirement? Thanks in advance. A: You'll have to dig into the code:

/app/code/core/Mage/Paypal/Model/Info.php There is a method called setAuthCode. You can pass it no auth code and it should assume the CVS. When you do this you'll need to tell magento that the payment is via CVS. Either by creating a dummy method to handle the data, or by creating an observer that listens to the payment\_method\_is\_set event. You'll need to use 'auto\_create\_account' to prevent automatic creation of an account. This is what's happening: In step 1 CVS makes an authorization request to the Paypal client. In step 2 Paypal sends an AuthorizationResponse back to the client. In step 3 the client forwards this to Paypal and Paypal does a verification. (Verification usually means: make sure e24f408de9
