spreadsheets via the cell addressing or replacing data that is misspelled or incorrect in one go. Moreover, you can change the groupings, clear unnecessary content or comments that are obsolete. It goes without saying that having some basic Excel knowledge entails you can reap more benefits from this utility. Then again, if you are just getting started with spreadsheets, do not hesitate to check out the user guide and make the most of the automation functions. Allows you to select the content that you want to share with others Generally speaking, one of the biggest issues about sharing documents with multiple users is that they can remove or edit content without your permission. Even if done by accident, deleting or adding data can sometimes have a huge impact on the results, particularly for financial documents. You will be happy to learn that the add-in includes functions that let lock and unlock cells, encrypt and decrypt data or delete the VBA protections, if necessary. At the same time, you can hide certain sheets, an option that can come in handy when sharing workbooks with unauthorized users or various departments in a company, for instance.

Q: How to redraw a canvas? I am new to canvas and I am trying to get canvas to show some text. The text is coming from a servlet. Once the user clicks on the canvas I would like it to display the text. I am new to JSF and not very familiar with everything else, but I thought it would be simple. Anyone know how to do this? A: Yes. You can also use a tag handler for this purpose.

```
@ManagedBean @ViewScoped public class Bean implements Serializable { public String text() { return "Test"; } }
```
