In 1982, AutoCAD was initially sold in the US for about \$2,000. The first major revision of AutoCAD was in 1986, when it was renamed AutoCAD LT and retooled to focus more on design and drafting. The first two revisions of AutoCAD were only available to customers of the company's then-new design and drafting department, Autodesk Systems Design. In the early 1990s, the company extended its suite of desktop and workplace design applications by acquiring and combining the products of Autodesk's former rivals. These included: Object Design, Engineering Workbench, Computer Aided Drafting (CAD) and Architecture (AR) in 1993, MicroStation in 1994, Inventor in 1995 and Mechanical Desktop in 1997. By 2009, most of the various Autodesk CAD software and computer-aided design, drafting, and related design related (CAD) software were released as individual components to customers. The third

revision of AutoCAD, AutoCAD LT, was released in 1989 and it later was renamed AutoCAD LT Classic in 1992. AutoCAD LT (3.0) was an early 3D-CAD program that

included many of the features of its predecessor, AutoCAD. It was compatible with the entire AutoCAD release line, and remained the most popular AutoCAD program for the rest of the decade. Autodesk developed AutoCAD LT for use in the departmental market, targeting traditional drawing and drafting functions, such as in architectural and engineering disciplines. Subscription services provide a mechanism to unlock additional features in the application with an additional fee. For instance, AutoCAD Pro adds a lot of value to AutoCAD as it allows unlimited drawing and is an essential tool for architectural designers. Several software add-ons allow customers to make drawings more efficient with features like lock/unlock during drafting, undo/redo, and the ability to see the schematic

before beginning fabrication. See also

In 1993, the Pentagon commissioned an independent investigation of the city of Mogadishu, Somalia. A team of American investigators was tasked with looking into the 22-day siege of the Somali capital and they found

what they call the "abnormal cases of mass murder," and what they call a series of "successful" urban terrorist attacks which were responsible for much of the death and destruction. It turns out that the US, who turned their backs on the enemy when they were being slaughtered, found their targets to be only the innocent non-combatants. In a PBS documentary called "Hannibal," it was revealed that the Pentagon did not even bother to make their own inquiry into what happened on the streets of Mogadishu that became known as Black Hawk Down. "They just wanted somebody to say that the place had been bombed and had been destroyed," explained Charles Woods, the lead investigator from the Army's Intelligence Center for Problems of the Army. Why didn't the media cover the Pentagon's report? For the Pentagon, Black Hawk Down was just another battle, and the whole thing was just a series of unfortunate, but non-terroristic, terrorist attacks. Of course, the official story is that it was all a tragic misunderstanding of an ambush, an

unfortunate clash between two groups of Somali militia. a1d647c40b
