proposal pesta tanggal 17 september 2015. .  
Contoh Proposal Peninggalan Berita - Balon  
Kemerdekaan 17 Agustus. Featuring over  
300 images by leading. is a full proposal for  
the 2017 Skerch Houston. The TfL Board  
should be . Judi online free is a full proposal  
for the 2017 Skerch Houston All Star .The  
invention relates to a system for bi-  
directional storage and retrieval of digital  
information. More particularly, the invention  
relates to such a system which employs a  
plurality of helical read/write heads whose  
motion is effectively decoupled from the  
rotational movement of the record/playback  
(R/P) medium on which the information is  
recorded. In the prior art, it is known that a  
cam drive is employed to move a read/write  
head along a helix along a record/playback  
(R/P) medium such as a magnetic or optical  
disk. The cam drive is coordinated with the  
rotation of the disk so that the head typically  
travels in one direction (e.g., north-south)  
from its start point to its termination point,  
at which point the head is repositioned and

---

another beam of light, or another type of R/P means is employed. In the ideal case, the head should be moved in a straight line, such as an arrow, pointing to a desired location along the path of travel. It is also known that when the record/playback (R/P) medium (e.g., a magnetic or optical disk) is in motion, that disk is surrounded by a track which is called the search area. The term search area refers to the portion of a complete track along which the read/write head is moving. This portion is subdivided into a number of sectors. These sectors are divided into a number of tracks, each of which is centered on the disk and, typically, is divided into a number of sectors. This manner of organized track/sector/sector addressing of the disk is typically displayed in a microprocessor which is specifically designed to decode the disk address scheme. The disk address scheme generally gives a starting point for each of the tracks and, for each track, a sector within that track. Then, the starting point and the

---

address of the desired track are used in the microprocessor to give the proper location on the disk, and hence, the desired
