Photoshop Elements Adobe Photoshop Elements () is a comprehensive imaging program that was designed for casual users. It uses a different and more limited but easy-to-learn interface than Photoshop. Elements offers three main editions: Standard, Design, and Photo-editing. It also has several other less-common features, such as the ability to edit video, edit PDFs (yes, PDFs can be edited!), the ability to work with both color and black-and-white images, and even the ability to create animations with motion paths (which are basically a series of shapes on a graphics tablet). If you're a beginner, you're going to be most comfortable with the Standard Edition. Standard's interface is very simple and lacks the depth and advanced features of Photoshop's. If you need to edit color images, Elements Photo is for you. It provides a simplified color-manipulation interface and also allows you to work with black-and-white images and still create colors. It has no video editing or animation abilities. The Design Edition provides everything that the Standard Edition does and then some. And, if you're an advanced user, you can use Photoshop's features in Photoshop Elements. ## Using Lightroom If you're a serious photographer, you're probably already familiar with Adobe's Lightroom software. Lightroom is intended to make it easier to manage and organize your images. The software has hundreds of features, but in this book, we'll be showing you how to use only the basics of Lightroom.

A lot has changed in the last week. The mortgage market has changed dramatically. More home loans are going into default. The economy is beginning to change. So where did we go wrong? Here's a quick run down of what we've done to our economy, and how we can change this path. First, for the last 15 years or so, we've been engaging in a destructive, never ending budget cut. Every year, we make massive cuts to our government. We believe that if we cut government spending, we'll get our debt reduced. But it doesn't work that way. You can take a nice round number, like \$1 trillion. That's easy. And you could push that round number way over \$10 trillion. All it does is push the government spending into the future. And that means they can say, "We're going to reduce the deficit, but we're going to do it a little later." They just give themselves more time to spend less money. So this is an incredibly deceptive way of saying we're going to reduce the deficit. That's what we did. The federal government is already half the size it was in 1950. That's a reduction of 75%. And it happened during this period when we tripled our GDP. We doubled our median wage. And, by most measures, we have one of the best economies in the world. What has changed is that the federal government has developed a vested interest. They like spending money on wars and prisons and guns and hate crimes and and the deficit. And they find it very difficult not to spend money. But what happens is that, in an economic downturn, what always happens is that spending stops, even by the government. If you're a business owner, you're going to spend. If you're a homeowner, you're going to spend. But the federal government, they can't stop. So, in a bad economy, when there's no spending, the federal government thinks that it's fine. Because we spent a lot more than we earned in a good economy, it's okay to continue spending. But, in a bad economy, what does that do? It puts more pressure on the debt. And I think it's safe to say, that we've now entered a debt ceiling crisis. In other words, you have a ruling party that wants to continue spending. And they're going to argue that they need more spending
